

EXHIBIT # 33

TEST RECONNAISSANCE VEHICLE

USA

This vehicle was made during the 1970s to 1980s. The turret, as you can see, does not belong on the chassis. The original turret did not carry two rocket launchers but carried a standard 20 mm cannon with one 7.62 mm machine gun. The average speed for this vehicle would have been around 30 to 40 mph on the road. The turret on this vehicle is a rocket launcher. There are two rocket tubes where two unguided rockets would be launched. The turret was also a predecessor of the turret on the M2 Bradley IFV of today.

DATA

Length: over 14 ft. Width: over 7 ft. Height: over 8 ft.

Power: Not determined

Crew: 2

Armament: one 20 mm cannon and one 7.62 mm machine gun

Armor: up to $\frac{3}{4}$ in

Speed: 30 mph
